Yes. There is a chance of getting into some muck particularly up Cement Creek.

Dan,

Please send me a copy of the SAP.

Should I plan on wearing my backup waders? Not sure if we'll be wading in mine-drainage with the potential to stain wading gear.

For everyone else, here is my work cell # 720.219.8868. Texts are fine.

See ya'll soon.

Cheers,

John

Hi all

We have a large sampling event coming up on September 22-26 and I believe you have agreed to participate. I wanted to let you know a couple things now and will be following up with more later if needed.

1) The charge code. For EPA employees, the full code is below. We changed it recently. Like last week. Please make sure your time and travel match what is below.

For FWS, please use the 08M5 and not A830 if you are billing to the EPA/FWS IAG.

2014 T 08L 303DD2 085MHR00

2) The general schedule as of now.

Meet in Silverton on 9/22 in the afternoon /evening. We will be going over Health and Safety concerns, roles and responsibilities and a brief training on the equipment. The likely location will be station A68 in town. Let me know if you need a map from our Sampling Plan (SAP). We will be providing maps to all when you arrive.

3) It is very likely we will be being filmed so please be on your best behavior, dress appropriately (no thong waders Barry) and strictly adhere to sampling protocols. (I know you would anyway).

There is phone reception in town but it is sketchy outside town. But I think it would be useful to exchange numbers so can you please send me a cell phone number you will have in the field and I will compile to share with the group. Of course you can opt out of this if you don't want to share your number.

I may be heading down a day early to help with electroshocking and will be looking for a volunteer to join me.

Oh and thank you very much for your willingness to help with this important project and don't hesitate to contact me if you have questions or concerns.

Hi Sue.
